JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

expect to satisfy most of their wants by sale and purchase and where also industrial activities become an interesting theme for thought. These conditions were not realized in the Middle Ages, because "economic regulation was the function of small, more or less self-sufficient communities." As people did not exchange most goods but applied them immediately to the satisfaction of wants, the value thought of was not purchasing power, but fitness to gratify desires. But as buying and selling commenced to play a larger rôle in the economic life of the community, the stress was shifted from value in use to value in exchange. It is characteristic of the change that this concept of value was applied to money before it was to commodities in general, simply because purchasing power was from the outset the important fact concerning money.

WESLEY C. MITCHELL.

*Positive Theorie des Capitals (Zweite Auflage).* By EUGEN VON BÖHM-BAWERK. Innsbruck: Verlag der Wagner'schen Universitäts-Buchhandlung, 1902. 8vo, pp. xxiv+468.

THIS second edition, long awaited with lively expectation by students of economic theory, proves to be an unchanged reprint of the first edition published some fourteen years ago. The author has found it impossible in the midst of his duties, recently undertaken as finance minister of Austria, to carry out his revision of this part as he had already done with the first part of *Capital und Capitalzins*. The author still adheres to his purpose of revising the *Positive Theory*, but is unable to do so until a more favorable time arrives. The student acquainted with recent magazine articles by the author, in which he has replied to his various critics, is aware, however, that no appreciable change has taken place in Böhm-Bawerk's views on the interest theory. His writings on the problem in the past fifteen years have been taken up, not with the revision and amendment of his interest theory, but merely with a restatement and defense of his well-known views against the critics who have assailed it from many directions. Each year is making the revision of the *Positive Theory* a more difficult task. The work of Böhm-Bawerk has been the most stimulating influence that has come into economic theory in the last half century, and yet his *Positive Theory* seems fated to go the way of its many predecessors. Its acceptance by students is each year becoming less and less possible.

FRANK A. FETTER.
